Rocket Software has confirmed that both issues have been resolved in Oracle Solaris Studio 12.6.

-
1. This also includes C++ 14 compatibility support for GCC 6.x onwards. ←
 2. The Oracle JDK 8 for a Solaris (SPARC or x64) platform supports only a 64-bit JDK. It is possible to run a 32-bit VisiBroker installation with the 64-bit JDK by applying the **VisiBroker 64-bit Service Overlay** appropriate to your platform. ←←←←
 3. Both Oracle Solaris Studio 12.4 and Oracle Solaris Studio 12.5 compilers are not supported with the latest versions of CORBA products. Two compiler issues have been uncovered during testing and raised against Oracle. Oracle bug numbers Bug 21681651, relates to an inconsistent behaviour in pushing function parameters on the stack between Studio 12.4 and earlier compiler versions. Oracle Bug 22179603, relates to an inconsistent behaviour in symbol name mangling between Studio 12.4 and earlier compiler versions. ←←←←
